How to make your mask

You need: scissors · a hole punch · elastic cord or ribbon · tape

1 Print

Print at actual size (100%) on card stock, or glue the page onto a cereal box so the mask stays stiff.

2 Cut

Cut along the dashed outline. Grown-ups: cut out the eye holes with a craft knife or small scissors.

3 Punch

Punch the two side circles. Put a piece of tape on the back first so the holes don't tear.

4 Tie

Thread elastic cord through each hole and knot it. Or tape a craft stick to one side for a hold-up mask.

Black & white pages: color the masks with crayons, markers or colored pencils before cutting.

Safety: make sure the eye holes are big enough to see well, and never wear a mask near traffic.
